*A Handbook for Interprofessional Practice in the Human Services* McGraw-Hill Education (UK)

One way to significantly improve the delivery of health care is to teach the health professionals who provide care to work together, to communicate with each other across professional boundaries, and to start to think and act like a team that has the patient at its center. The team-based care movement is at the heart of major changes in medical education and will become an element in the new accreditation standards. Through its Centre for Interprofessional Education, the pioneering approach in this area taken by the University of Toronto has attracted international attention. The role of the Centre for IPE, a formal partnership between the University of Toronto and the Toronto Academic Health Sciences Network, is to create a hub for the university and the many teaching hospitals where all core parties can be actively engaged in redesigning this new model of health care. In *Creating the Health Care Team of the Future*, Sioban Nelson, Maria Tassone, and Brian D. Hodges give a brief background of the Toronto Model and provide a step-by-step guide to developing an IPE program.

Interprofessional teamwork and collaborative practice are emerging as key elements of efficient and productive work in promoting health and treating patients. The vision for these collaborations is one where different health and/or social professionals share a team identity and work closely together to solve problems and improve delivery of care. Although the value of interprofessional education (IPE) has been embraced around the world - particularly for its impact on learning - many in leadership positions have questioned how IPE affects patient, population, and health system outcomes. This question cannot be fully answered without well-designed studies, and these studies cannot be conducted without an understanding of the methods and measurements needed to conduct such an analysis. This Institute of Medicine report examines ways to measure the impacts of IPE on collaborative practice and health and system outcomes. According to this report, it is possible to link the learning process with downstream person or population directed outcomes through thoughtful, well-designed studies of the association between IPE and collaborative behavior. *Measuring the Impact of Interprofessional Education on Collaborative Practice and Patient Outcomes* describes the research needed to strengthen the evidence base for IPE outcomes. Additionally, this report presents a conceptual model for evaluating IPE that could be adapted to particular settings in which it is applied. *Measuring the Impact of Interprofessional Education on Collaborative Practice and Patient Outcomes* addresses the current lack of broadly applicable measures of collaborative behavior and makes recommendations for resource commitments from interprofessional stakeholders, funders, and policy makers to advance the study of IPE.

There will always be a need for professionals to work collaboratively if they are to provide the highest standard of care. Interprofessional working encourages practitioners to understand the roles of other professionals and to learn from each other, as well as from service users and carers, to ensure the full benefit of this collaboration is realised. It is an essential element of both education and practice for today's professionals. *Interprofessional Working in Health and Social Care* discusses the rationale, skills and conditions required for interprofessional working. In addition, it provides an overview of the roles and perspectives of different health professionals across a broad range of expertise: education, housing, medicine, midwifery, nursing, occupational therapy, physiotherapy, police, probation, radiography, social work and youth work. The second edition: • Offers a broad variety of case studies from a range of fields and settings. • Includes a new chapter dedicated to interprofessional working with service users and carers. • Looks forward, offering brand new content on new and emerging roles such as specialist paramedics and approved mental health practitioners. This book is a valuable tool for students and practitioners across the health and social care discipline, employing engaging case studies and reflective activities to support learning about interprofessional and interagency collaboration. Erratum: please note the term 'Approved Mental Health Practitioner' has been used in error, instead of 'Approved Mental Health Professional'. This will be corrected as soon as possible on the next reprint and the e-book version has been corrected.

Clinical decision-making is an indispensable facet of professional nursing care. It is essential that students develop sound decision-making skills in order to deal with the challenges they will encounter as registered nurses. This book enables pre-registration nursing students to understand, develop and apply these skills in order to practise safely and effectively. The structure of the book helps the student progress in effective decision-making right from the first to final year of their programme. The book links theory to previous students' experiences and clinical scenarios to show how to use these skills in practice. *Transforming Nursing Practice* is a series tailor made for pre-registration student nurses. Each book in the series is: Affordable Mapped to the NMC Standards and Essential Skills Clusters Focused on applying theory to practice Full of active learning features

The provision of care within the context of the modern health service environment involves a wide range of professionals. The health care team might include general practitioners, nurses, midwives, hospital doctors, physiotherapists, other allied health professionals, as well as receptionists and practice managers. To optimise delivery of care at both individual and population levels, team members must work collaboratively with colleagues in

their own profession and others. This book, in the Values-Based Medicine series, adds the dimension of values to the more usual discussions of teamwork, considering interactions between health care professionals and how these might be affected by differences in professional and personal values. Examples of scenarios based on real-life experience promote learning and reflection. Anybody working or training in health care and who aspires to collaborate successfully with their colleagues in other specialties will find this book extremely valuable, as will educators who facilitate learners in teamwork.

The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

Teamwork is essential to improving the quality of patient care and reducing medical errors and injuries. But how does teamwork really function? And what are the barriers that sometimes prevent smart, well-intentioned people from building and sustaining effective teams? *Collaborative Caring* takes an unusual approach to the topic of teamwork. Editors Suzanne Gordon, David L. Feldman, MD, and Michael Leonard, MD, have gathered fifty engaging first-person narratives provided by people from various health care professions. Each story vividly portrays a different dimension of teamwork, capturing the complexity—and sometimes messiness—of moving from theory to practice when it comes to creating genuine teams in health care. The stories help us understand what it means to be a team leader and an assertive team member. They vividly depict how patients are left out of or included on the team and what it means to bring teamwork training into a particular workplace. Exploring issues like psychological safety, patient advocacy, barriers to teamwork, and the kinds of institutional and organizational efforts that remove such barriers, the health care professionals who speak in this book ultimately have one consistent message: teamwork makes patient care safer and health care careers more satisfying. These stories are an invaluable tool for those moving toward genuine interprofessional and intraprofessional teamwork.
