The Lazarus project has its roots in the Megido project. From Google Groups and other mailing lists we can trace some information about Megido. It was a project that attempted to make an open source clone of Delphi, starting with the source code to Sybil (which in turn was a clone of Delphi for OS/2, although its designer was rather restricted). Megido began in 1998, but died somewhere in 1999, owing to lack of focus, and lack of interest in a Sybil-based clone with Sybil's restrictions. Lazarus is free, Open Source and multi platform.
